SUMMARY

AI product designer with 10+ years designing and shipping AI-powered learning, workflow, and decision-support products at scale. Former Lead UX Designer at CK-12, where I led design for Flexi, an LLM-powered student tutor, and built complex student, teacher, and administrator experiences for a K-12 platform serving 20M+ users worldwide. Currently building Offboard, an AI career-transition platform that combines talent and career-decision workflows, human-in-the-loop AI patterns, structured research, document generation, and full-stack product execution across React, TypeScript, Supabase, Postgres, and Deno edge functions.

EXPERIENCE

Founding Product Designer & AI Systems Lead

MAY 2025 – PRESENT

Offboard

- Designed and built Offboard's AI-powered career-transition platform, creating talent and career-decision workflows that help job seekers evaluate roles, understand companies, tailor resumes, prepare for interviews, and make higher-confidence career decisions.
- Built full-stack product experiences across Vite, React, TypeScript, Tailwind, shadcn/ui, Supabase, Postgres/RLS, and Deno edge functions, moving quickly from ambiguous product concepts to live beta workflows.
- Designed human-in-the-loop AI patterns including visible agent progress, editable outputs, approval checkpoints, confirmation-first actions, and trust-building safeguards for emotionally high-stakes user decisions.
- Created multi-step AI workflows that transform job descriptions, resumes, user goals, and external research into structured analysis, recommendations, and generated application materials.
- Designed operational product surfaces across authentication, user data, AI credits, document generation, assistant experiences, employer workspaces, and paid plans.
- Used Claude Code, Codex, Lovable, and other AI development tools as part of a solo builder workflow, developing strong intuition for how AI-first software should feel, where automation should defer to humans, and how to turn model output into usable product experiences.

Lead UX Designer

MAY 2016 – MAY 2025

CK-12 Foundation

- Led UX for Flexi, CK-12's LLM-powered student tutor, designing conversational and guided learning flows that helped students reason through math and science problems rather than simply receive answers.
- Designed complex student, teacher, and administrator workflows across learning, practice, assignments, insights, content discovery, and support for a K-12 platform serving 20M+ users worldwide.
- Partnered closely with product, engineering, data science, curriculum, and research teams to shape AI-driven learning experiences from early concept through shipped product.
- Conducted user research and usability testing with students and teachers, translating behavioral insights into product improvements that reduced cognitive load and made complex workflows easier to navigate.
- Developed CK-12's 2.0 design system across web and responsive surfaces, aligning interaction patterns with WCAG accessibility guidelines and partnering with engineering on a parallel React component library.

- Shaped information architecture and navigation across multi-sided product surfaces so students, teachers, and administrators could move between content, practice, assignments, insights, and support without friction.

Product Lead

NOV 2021 – NOV 2022

OdysseyDAO

- Designed and developed an education platform that onboarded 80,000+ learners into crypto and web3 concepts through simple, approachable learning experiences.
- Created an automated email course completed by 12,000+ learners, combining curriculum design, UX writing, product strategy, and engagement analytics.
- Managed a distributed team of 38 contributors to translate 400,000+ words into 10 languages, building lightweight systems to maintain quality at scale.

UX Production Designer

JUN 2014 – MAY 2016

Lowe's Companies, Inc.

- Produced and iterated on creative assets for home, landing, and brand pages in a fast-paced, experiment-driven ecommerce environment.
- Managed a team of 4 designers on a Global Redesign effort to modernize the ecommerce experience and align it with updated brand and UX guidelines.

EDUCATION

BS, Entrepreneurship

AUG 2005 – MAY 2011

University of Utah — 3.8 GPA, Academic All-American

MBA, Sports Business

JUN 2011 – JUN 2012

St. Leo University

SKILLS

AI Product Design: AI-first product design, LLM UX, human-in-the-loop workflows, agentic workflows, AI automations, decision-support UX, model-output review flows, prompt/workflow design

Product & Interaction: Internal tools, complex workflow design, talent workflows, knowledge systems, information architecture, high-fidelity prototyping, interaction design, UX writing, usability testing, user research

Design Systems: Design systems, component patterns, accessibility, WCAG, responsive web, Figma, design critique, product quality review

Technical Fluency: React, TypeScript, JavaScript, Vite, Tailwind CSS, shadcn/ui, Supabase, Postgres/RLS, Deno edge functions, API integrations, Stripe, Resend

ADDITIONAL INFORMATION

Former professional football player in the CFL and Academic All-American at the University of Utah.
